Short Description

- Durable 18-gauge double-wall steel construction with 1.5-inch insulating air space
- Vertical, horizontal, and double-duty cabinet styles for flexible drum storage and dispensing
- Choice of drum rollers for easy movement or drum supports for stable, stationary storage
- Adjustable SpillSlope shelves and leakproof sumps for safe spill containment
- Available in yellow, red, gray, or white for easy material identification
- Manual or self-closing doors to meet specific safety and compliance needs

Description

Justrite Flammable Drum Safety Cabinets provide safe and compliant storage for hazardous materials in drums, including flammable solvents, waste liquids, and other chemicals. Designed to accommodate various

drum configurations, these cabinets are available in vertical, horizontal, and double-duty styles to suit diverse storage and dispensing needs. Constructed from durable 18-gauge double-wall welded steel with 1.5 inches of insulating air space, they offer superior fire resistance and comply with OSHA and NFPA regulations.

Vertical drum cabinets are ideal for storing one or two 30- or 55-gallon drums, with optional drum rollers for easy rotation or drum supports for stationary storage. Horizontal drum cabinets are designed for gravity-flow dispensing applications with space for a drip-can and tracks to guide the drum cradle into position. Double-duty drum cabinets feature two compartments: one for a vertical drum (up to 55 gallons) and another for up to twelve 5-gallon safety cans, providing versatile storage options.

Available in yellow, red or gray, these cabinets can be configured with manual closing or self-closing doors to meet specific safety requirements. Self-closing doors enhance fire protection by automatically latching during emergencies. Additional features include adjustable SpillSlope® shelves, leakproof sumps for spill containment, dual vents with flame arresters, grounding connectors, and trilingual warning labels.

Justrite Flammable Drum Safety Cabinets are designed to meet the demanding requirements of laboratories, manufacturing facilities, and industrial plants. Whether you need vertical storage for multiple drums, horizontal dispensing stations, or dual-purpose compartments for drums and cans, these cabinets provide a reliable solution tailored to your needs. Configure your cabinet today to ensure safe and compliant hazardous material storage.
