

# Standard Flammable Safety Cabinet

## Product Images

## Short Description

---

- Superior Fire Resistance: 18-gauge steel double-walls with 1.5 inches of insulation
- Compliance and Certification: Meets OSHA and NFPA standards, FM approved, and comes with a 10-year warranty
- Versatile Configurations: Available in multiple capacities and colors (yellow, red, gray, white)
- Durable Finish: Lead-free epoxy/polyester powder-coat for chemical resistance and longevity
- Customizable Options: Offers a range of configurations to meet specific industry and location requirements, ensuring compliance with safety standards

## Description

---

Eagle Standard Safety Cabinets are available in various configurations to meet your specific storage needs. Choose from different colors to designate the type of materials stored, such as yellow for flammables, red for combustibles, gray or white for waste, and brown/neutral for lab use. Select the appropriate capacity to fit your workspace and storage requirements, with options in 30, 45, 60 and 90 gallons. There are also various door closure options, including manual-close, self-close, and sliding self-close doors. This flexibility allows you to meet the exact safety standards required for your industry and location.

Self-closing doors are a valuable feature in safety cabinets, offering enhanced safety and compliance. These doors automatically close and latch in the event of a fire or emergency, providing a critical barrier against the spread of fire and reducing the risk of ignition outside the cabinet. Self-closing doors minimize human error by ensuring that the cabinet is always properly closed, even when staff are distracted or forgetful. This feature is particularly important for storing hazardous materials, as it helps contain vapors and prevent accidental releases, thereby improving overall workplace safety.

Flammable cabinets feature a durable high gloss powder finish, providing excellent chemical resistance both inside and out. This finish also helps minimize the effects of corrosion and humidity, ensuring the longevity of your safety cabinet. Constructed to meet OSHA and NFPA standards, Eagle safety cabinets are designed to provide a secure and compliant storage solution for hazardous materials.

FM approved and backed by a commitment to quality, Eagle Standard Safety Cabinets offer peace of mind and reliable performance. Whether you're working in a laboratory, manufacturing facility, or chemical processing plant, these cabinets provide the flexibility and compliance you need for safe hazardous material storage. Invest in an Eagle safety cabinet to ensure the highest level of safety, compliance, and customization for your workplace's storage needs. Configure your cabinet today to find the perfect solution for your specific requirements.
